

**Database Systems**  
**Spring Semester 2018**  
**Assignment #4 (Solution)**

Note: errors and omissions are possible. The solution may not contain graphic contents but students are expected to provide the complete solution.

**Question 1:** Consider a relation  $R(A, B, C, D)$  with FD's

$AB \rightarrow C$ ,

$BC \rightarrow D$ ,

$CD \rightarrow A$ ,

And  $AD \rightarrow B$ .

a) What are all the nontrivial FD's that follow from the given FD's? You should restrict yourself to FD's with single attributes on the right side.

$[A]^+ = \{A\}$

$[B]^+ = \{B\}$

$[C]^+ = \{C\}$

$[D]^+ = \{D\}$

$[AB]^+ = \{ABCD\}$

$AB \rightarrow D$

$AB \rightarrow C$

$[BC]^+ = \{BCDA\}$

$BC \rightarrow D$

$BC \rightarrow A$

$[CD]^+ = \{CDAB\}$

$CD \rightarrow A$

$CD \rightarrow B$

$[AD]^+ = \{ADBC\}$

$AD \rightarrow B$

$AD \rightarrow C$

b) What are all the keys of  $R$ ?

$$[A]^+ = \{A\}$$

$$[B]^+ = \{B\}$$

$$[C]^+ = \{C\}$$

$$[D]^+ = \{D\}$$

$$[AB]^+ = \{ABCD\}$$

$$[BC]^+ = \{BCDA\}$$

$$[CD]^+ = \{CDAB\}$$

$$[AD]^+ = \{ADBC\}$$

So the keys are AB, BC, CD, AD. Adding another attribute further in any of the key will make it super key not a key any more.

c) List any five superkeys for  $R$  that are not keys?

[ABC]

[ABD]

[ADC]

[ABCD]

[BCD]

**Question 2:** Show that each of the following are *not* valid rules about FD's by giving relational instance that satisfy the given FD's (following the "if") but not the FD that allegedly follows (after the "then").

b) If  $AB \rightarrow C$  and  $A \rightarrow C$ , then  $B \rightarrow C$ .

A	B	C
<a href="mailto:bilal@hotmail.com">bilal@hotmail.com</a>	Bilal	Lahore
<a href="mailto:ali@gmail.com">ali@gmail.com</a>	Ali	Karachi
<a href="mailto:bilal01@gmail.com">bilal01@gmail.com</a>	Bilal	Karachi

c) If  $AB \rightarrow C$ , then  $A \rightarrow C$  or  $B \rightarrow C$ .

A(empid)	B-(project id)	C-(manager)
<a href="mailto:bilal@hotmail.com">bilal@hotmail.com</a>	1	Shah Nawaz
<a href="mailto:ali@gmail.com">ali@gmail.com</a>	2	Shah Nawaz
<a href="mailto:ali@gmail.com">ali@gmail.com</a>	1	Murtaza Jahanzaib
<a href="mailto:bilal@hotmail.com">bilal@hotmail.com</a>	2	Murtaza Jahanzaib

**Question 3: Find out whether the following set of functional dependencies for a relation R (A,B,C,D,E)**

**are equivalent or not.**

1.F =  $E \rightarrow D$ ,  $ED \rightarrow C$ ,  $B \rightarrow EC$ ,  $B \rightarrow A$ ,  $D \rightarrow A$

2.G =  $E \rightarrow ADC$ ,  $B \rightarrow AE$ ,  $D \rightarrow B$

First Check if F Covers G

Checking for FD  $E \rightarrow ADC$

$[E]^+ = \{EDC\}$

$E \rightarrow ADC$  cannot be inferred from above closure i.e F do not cover G. So two sets of FDs are not equivalent

**Question 4: Consider the relation R(A,B,C,D,E,F,G,H,I) and a set of functional dependencies:**

FD's =  $\{A \rightarrow B, ABCD \rightarrow E, EF \rightarrow GH \text{ and } ACDF \rightarrow EG.\}$

i. Find Keys for the above relation R?

Check if any attribute is not present on the RHS. If not then it will be essentially part of all candidate keys.

A C D F I

$[ACDFI]^+ = ABCDEFGHI$

So ACDFI is the key of the above relation. Adding any other attribute to it will make it a super key

ii. Find a minimal cover for the above set of FDs'?

*Step1 (Rule 1 states that RHS of all FDs should be single attributes.):*

$A \rightarrow B,$

$ABCD \rightarrow E,$

$EF \rightarrow G$

$EF \rightarrow H$

$ACDF \rightarrow E$

$ACDF \rightarrow G$

*Step2 Rule 2 says to eliminate extraneous attributes:*

$A \rightarrow B,$

$ACD \rightarrow E$

$EF \rightarrow G$

$EF \rightarrow H$

$ACD \rightarrow E$

$ACDF \rightarrow G$

*Step3 Rule 3 says to eliminate redundant functional dependencies. :*

$A \rightarrow B,$

$ACD \rightarrow E$

$EF \rightarrow G$

$EF \rightarrow H$

iii. Decompose the above relation into 3NF that preserve all the dependencies.

Using the Above Result

R1 (A, B)

R2(A, C,D E)

R3(E, F G,H)

None of the relation contains key. Adding Relation containing key

R4(A, C, D, F , I)

**Question 5:** Suppose you are given a relation  $R(A, B, C, D)$ . For each of the following sets of FDs, assuming

they are the only dependencies that hold for  $R$ , do the following:

- (a) Identify the candidate key(s) for  $R$ .
- (b) State whether or not the proposed decomposition of  $R$  into smaller relations is a good decomposition (lossless, dependency preserving, attribute preserving), and briefly explain why or why not.

a)  $AB \rightarrow C, C \rightarrow A, C \rightarrow D$ ; decompose into  $ACD$  and  $BC$ .

i. Candidate Keys

B is the must attribute of the candidate keys

$[AB]^+ = \{ABCD\}$

$[BC]^+ = \{BCAD\}$

so AB, BC are the candidate keys

ii.

No, because  $AB \rightarrow C$  will be lost in the proposed relation and dependency will not be preserved. However it is lossless decomposition because  $ACD \cup BC = ABCD$

$ACD \cap BC = C$  which is key in R1.

b)  $A \rightarrow BC, C \rightarrow AD$ ; decompose into  $ABC$  and  $AD$ .

i.  $[A]^+ = \{ABCD\}$

$[C]^+ = \{CADB\}$

$[BD]^+ = \{BD\}$

Only A and C are the candidate keys.

- ii. It is a bad decomposition because the  $C \rightarrow AD$  dependency will be lost. Moreover it is lossy decomposition because  $ABC \cap AD = C$  that is not key in either decomposed relations.

c)

$A \rightarrow B, B \rightarrow C, C \rightarrow D$ ; decompose into  $AB$  and  $ACD$ .

- i.  $[A]^+ = \{ABCD\}$

Only A is the candidate key.

- ii. It is bad decomposition because  $B \rightarrow C$  will be lost in the result relations  
However it is lossless decomposition because  $ACD \cup AB = ABCD$

$ACD \cap AB = A$  that is key in relation AB.

d)  $A \rightarrow B, B \rightarrow C, C \rightarrow D$ ; decompose into  $AB, AD$  and  $CD$ .

- i.  $[A]^+ = \{ABCD\}$

Only A is the candidate key.

- ii. It is bad decomposition because  $B \rightarrow C$  will be lost in the result relations  
However it is lossy decomposition because  $AB \cup AD \cup CD = ABCD$   
But  $AD \cap CD = \phi$  and  $AB \cap CD = \phi$  i.e there is no common attribute to join the relation.

#### Question 6:

Figure given above shows a shipping manifest. Your assignment is as follows:

- a. Identify the functional dependencies between the attributes.

Shipment Id  $\rightarrow$  Destination, Shipment Date, Ship Number, Origin

Ship Number  $\rightarrow$  Captain

Destination, Origin, Shipment Date  $\rightarrow$  Expected Arrival

Item Number  $\rightarrow$  Weight, Description, Type

Item Number, Shipment ID  $\rightarrow$  Quantity

- b. Draw a relational schema and diagram the functional dependencies in the relation.

Shipment Id	Origin	Destination	Ship Number	Expected Arrival	Captain	Shipment Date
-------------	--------	-------------	-------------	------------------	---------	---------------

Item No	Shipment ID	Type	Description	Weight	Quantity	Total Weight
---------	-------------	------	-------------	--------	----------	--------------

See the FDs in part a

- c. In what normal form is this relation(1NF,2NF,3NF,BCNF,4NF)? Decompose the above relation into a set of 3NF relations.

The relation does not satisfy any of the normal form. Because Captain Attribute is non-atomic as well as the relations have partial and transitive dependencies.

1NF:

<u>Captain ID</u>	Captain Name
-------------------	--------------

<u>Shipment ID</u>	Origin	Destination	Ship Number	Expected Arrival	<i>Captain ID</i>	Shipment Date
--------------------	--------	-------------	-------------	------------------	-------------------	---------------

<u>Item No</u>	<u><i>Shipment ID</i></u>	Type	Description	Weight	Quantity	Total Weight
----------------	---------------------------	------	-------------	--------	----------	--------------

Converting into 3NF using the (MC) Algorithm:

Candidate Keys

R1: Captain Id

R2: Shipment ID

R3: Item No, Shipment ID

Minimal Cover of R1 {

Captain ID → Captain Name

}

<u>Captain ID</u>	Captain Name
-------------------	--------------

Minimal Cover of R2 {

Shipment ID → Origin, Destination, Ship No, Shipment Date

Ship No → Captain ID

Origin, Destination, Shipment Date → Expected Arrival

}

3NF:

<u>Shipment ID</u>	Origin (FK)	Destination(FK)	<i>Ship No(fk)</i>	Shipment Date(fk)
--------------------	-------------	-----------------	--------------------	-------------------

<u>Ship No</u>	Captain ID(fk)
----------------	----------------

<u>Origin</u>	<u>Destination</u>	<u>Shipment Date</u>	Expected Arrival
---------------	--------------------	----------------------	------------------

Minimal Cover of R3 {

Item No → Weight, Description, Type

Item Number, Shipment ID → Quantity

}

3NF:

<u>Item Number</u>	Weight	Description	Type
--------------------	--------	-------------	------

<u>Item Number(fk)</u>	<u>Shipment ID (FK)</u>	Quantity
------------------------	-------------------------	----------

d. Draw a relational schema for your 3NF relations and show the referential integrity constraints.

See the above question

### Question 7:

The following statement is presented to the patient (or patient representative) when the patient is discharged. Assume that each item on the bill has a unique description and that the charge for a particular

item may vary from one patient to another.

Using the normalization, develop a set of BCNF relations for the patient billing system shown below.

**Draw a relational schema for the BCNF relations you developed. Be sure to show the functional dependencies and referential integrity constraints.**

#### 1. Functional Dependencies

{Patient# → Patient Name, Date Admitted, Date Discharged, Address

Code → Description

Code → Total Charge

Invoice Date, Patient# → Due Date, Account#}

## 2. Converting into 3NF (through MC method)

{

Patient# → Patient Name, Date Admitted, Date Discharged, Address

Code → Description, Total Charge

Invoice Date, Patient# → Due Date, Account#

}

Relations:

<u>Patient#</u>	Patient Name	Date Admitted	Date Discharged	Address
-----------------	--------------	---------------	-----------------	---------

<u>Code</u>	Description	Total Charge
-------------	-------------	--------------

<u>Invoice Date</u>	<u>Patient#(FK)</u>	Due Date	Account#
---------------------	---------------------	----------	----------

The Above Relations are already in BCNF form
